

BIN TEMPERATURE MONITORING

TEMPUTECH, INC.

Automatically Scans

User Defined Setup

Color Coded Screens

Remotely Accessible

Specifications

Programmable set-up

Stand-Alone or
Networkable

Remotely accessible
(Requires Internet
Connection)

Standard Features:

Auto Cycle

Delay Scan

Manual Scan

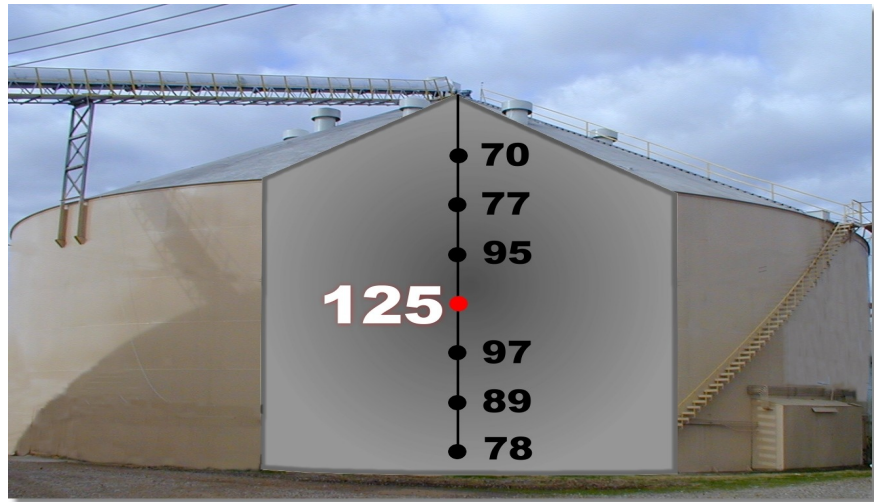

Access to Stored
History

View

Print

Color Coded Screens
indicate changes of
temperatures from the
previous scan

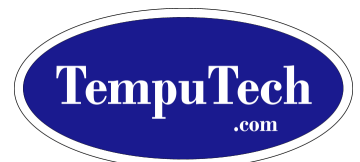

TempuTech is the
Smart Choice

TempuTech's Bin Temperature software provides any size facility with the ability to monitor, store, and print grain & feed temperatures at their facilities. Customers can set up delayed scans collecting temperatures at the same time each day to manage their grain temperatures and monitor changes in the bin temperatures. Easy to identify color codes display changes to individual thermocouples, and based on the user's set-up perimeters alerts the operator of changes to the temperature from the pervious scan. Our Bin Temperature Software can easily be configured to operate with your facilities existing temperature system equipment and provides a flexible way to transition toward the current technology. For more information on this and other Software products visit us at www.temputech.com.
