Supports up to 56 pieces of Equipment (Expandable to 112)

Supports most Industry sensors and can display up to 2240 Individual Sensors

Secure test mode

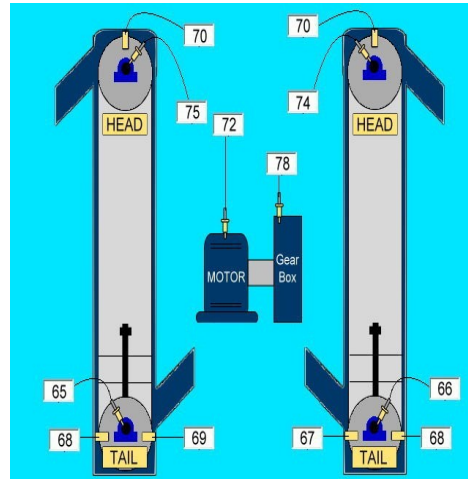

Works in stand alone or networked environment

E-Mail, SMS (Text Msg) notification of Alarms

Easy Set-Up for Administrators

Commission History Log

TempuTech is the "SMART" Choice

Guardian Hazard Monitoring System was released in 2009, this new software and hardware from TempuTech, Inc. brings new State of the Art technology to the Grain and Cottonseed markets. The introduction of our new Guardian Software is the first of it's kind to provide real time easy to use screens for monitoring your facility. The software contains ten (10) levels of password protection allowing facility managers to deploy systems from a pre-determined task list and define user permissions based on the employee's responsibility. The Guardian Software has been designed to operate over a standard TCP/IP network. TempuTech's Guardian software includes enhanced features like monitoring equipment run times and providing soft alarms when equipment is due for maintenance. For more information on this product and other TempuTech products visit www.temputech.com.
